

eGuard: Sites

Please make sure to read the [eGuard Overview](#) before continuing.

See other related documents in the [eGuard Fundamentals chapter](#).

Sites allow for a grouping of devices based on location, and has fields to add information relevant to that particular location, geared towards solar production. Multiple devices can be added to a single Site where they can easily be cross-referenced for troubleshooting or other purposes. Devices can be added or removed from Sites as needed.

The eGuard Sites page can be through eGuard at the top tab bar.

The screenshot shows the eGuard web application interface. At the top is a navigation bar with a logo and menu items: Overview, eGuard, Support, and Company. Below this is a secondary navigation bar with tabs: eGuard, Portfolio, Permissions, Groups, Alerts, and Sites. The 'Create Site' button is prominently displayed. The main content area is divided into two sections. On the left, 'Your Sites' lists three existing sites: 'MacDonald Solar Farm', 'Windy Halls University', and 'Acme EV Chargers 2108 Broadway Ave'. On the right, 'Link Devices to an Existing Site' includes a note about unlinking the last device and a form with two dropdown menus. The first dropdown is labeled 'List of Your Sites:' and contains 'MacDonald Solar Farm'. The second dropdown is labeled 'List of Your Devices:' and contains 'Name: eGauge9996, Label: eGauge9996, Job: Solar Farm'. A green 'Link Device to Site' button is at the bottom of the form.

Main eGuard Site View

From this page, you can create a new site, expand and edit an existing site under "Your Sites", or quickly link a device to an existing site on the right-hand side of the page.

Creating a site

To create a new site, click the large "Create Site" button at the top.

You must link a device to create a new site. You cannot create a site with no linked devices.

Sites:

- Sites are designed to allow devices to be organized by a specific location or job site
- This makes it possible to link site-related information to devices and to quickly access the individual device detail page for each device
- Note: a site must have a device associated with it so unlinking the last device per site will delete the site
